# WELDING INSPECTION REPORT

Resident Engineer: Siegenthaler, Peter **Report No:** WIR-021489

Address: 333 Burma Road **Date Inspected:** 02-Mar-2011

City: Oakland, CA 94607

**OSM Arrival Time:** 630 **Project Name:** SAS Superstructure **OSM Departure Time:** 1500 **Prime Contractor:** American Bridge/Fluor Enterprises, a JV Contractor: American Bridge/Fluor Enterprises, a JV **Location:** Job Site

**CWI Name:** See below **CWI Present:** Yes No **Inspected CWI report:** Yes N/A **Rod Oven in Use:** Yes No No N/A N/A **Electrode to specification:** Yes No Weld Procedures Followed: Yes No N/A N/A Yes **Qualified Welders:** Yes No **Verified Joint Fit-up:** No N/A N/A Yes No N/A **Approved Drawings:** Yes No **Approved WPS: Delayed / Cancelled:** Yes No N/A

34-0006 **Bridge No: Component: SAS OBG** 

### **Summary of Items Observed:**

The Quality Assurance (QA) Inspector, Rick Bettencourt was on site at the job site between the times noted above. The QA Inspector was on site to randomly observe the in process welding and inspection of the weld joints identified as 10E/11E-A1-A5 and the following observations were made:

### 10E/11E-A1-A5

Upon the arrival of the QA Inspector in the am it was observed the above identified weld joint was fit up with the approved temporary attachments or fit up gear in place. Upon the arrival of the QA Inspector, the QC Inspector Bonifacio Daquinag informed the QA Inspector the planar misalignment inspection had been previously performed by SE QC and just required QA verification. The QC Inspector presented the QA Inspector with a planar misalignment map of the areas previously located by QC Tony Sherwood. The QA inspector noted the map indicated the only planar off set was located at 3 locations through out the transverse weld joint. The QA Inspector reviewed the document and proceeded to perform the random QA verification of the weld joint. The QA Inspector observed areas indicated and performed QA verifications working together with the QC Inspector. After the inspection was completed the QA Inspector noted a total of 450mm at three separate locations. The QA Inspector asked the ABF Welding Superintendent Dan Ieraci if he intended to correct the unacceptable planar misalignment (see summary of conversations). The QA Inspector and the QC Inspector recorded the following locations of planar misalignment:

The unacceptable planar misalignment was located at the following 3 locations:

- 1.) y=10100mm-10310mm (20mm deck section) 0mm-2mm misalignment (210mm in length)
- 2.) y=18580mm-18560mm (14mm deck section) 0mm-2mm misalignment (70mm in length)

# WELDING INSPECTION REPORT

(Continued Page 2 of 3)

3.) y=21180mm-21350mm (14mm deck section) 0mm-2mm misalignment (170mm in length)

Total planar misalignment 450mm of the total length of the weld joint.

The QA Inspector and the SE QC Inspector Bonifacio Daquinag performed dimensional verification of the gaps at the steel backing. The QA Inspector noted the 4 separate areas where the gap at the steel backing exceeded 2mm. The QA Inspector noted the largest gap was 3mm and no gap exceeded 3mm for the above identified transverse weld splice. The QA Inspector was informed by the Lead QC Bonifacio Daquinag the contractor will write and submit and internal non conformance report in addition to a request to weld repair over the excessive gaps at the steel backing.

Gaps between the steel backing and bevel are located at the following locations:

1.) Y=14355mm-14410mm 11E 2.5mm (55mm length) 2.) Y=21270mm-21370mm 10E 2.5mm (100mm length) 3.) Y=24580mm-24620mm 10E 2.5mm (40mm length) 4.) Y=27200mm-27280mm 10E 3mm (80mm length)

#### 8E/9E-A1-A5

Upon the arrival of the QA Inspector in the am it was observed the above identified weld joint was fit up with the approved temporary attachments or fit up gear in place. The QA Inspector randomly observed the ABF welders identified as George Lopez and Fred Kaddu begin performing the SMAW full length tack weld. The QA Inspector was informed by the American Bridge/Fluor (ABF) welding Superintendent Dan Ieraci no runoff tabs would be utilized on this transverse weld splice. The QA Inspector randomly observed the SE QC Inspector Tony Sherwood was on site monitoring the in process SMAW tack welding. The QA Inspector randomly observed and noted the SMAW parameters for both of the above identified ABF welders and they were 126 Amps while utilizing 1/8" E7018 low hydrogen electrodes. The QA Inspector randomly observed the full length tack weld was not completed on this date. The QA Inspector randomly observed the ABF welders begin welding the ends of the weld joint. The QA Inspector noted the contractor will not utilize weld tabs rather back step or cascade the submerged arc welding.

## **Summary of Conversations:**

Mr. Ieraci informed the QA Inspector no additional fitting tasks would be performed due to the fact that ABF was breaking fit up gear. Mr. Ieraci informed the QA Inspector due to the rigidity of the top deck plate closed rib stiffeners, ABF was unable to perform any additional fitting tasks.

The QA Task Lead Inspector Bill Levell Informed the QA Inspector the Caltrans Structures Representative Karen Wang approved the weld of the areas identified to have planar misalignment at 1000. In addition Mr. Levell informed the QA Inspector the Caltrans Structures Materials Representative Nick Havass approved the weld repair of the areas of the weld joint where the gaps between the steel backing and the bevel exceeded 2mm. The approval for the repair welding was given at 1000 as well.

#### **Comments**

This report is for the purpose of determining conformance with the contract documents and is not for the purpose of making repair or fit for purpose recommendations. Should you require recommendations concerning repairs or
